

Project Profile

Greenhouse Gas Emission Reduction Action Plans and Progress Reports

Central Canada

Annual greenhouse gas emission reports have been completed for several pulp and paper mills as per the voluntary requirements of the VCR (Voluntary Challenge Registry) program to reduce greenhouse gas emissions.

The following activities were included in the scope of work:

1. calculation of baseline greenhouse gas emission data from all sources;
2. preparation of plant energy use and greenhouse gas emission profiles in spreadsheet and graphical formats;
3. discussion of actions taken which have reduced greenhouse gas emissions including sustainable forest management practices; and
4. determination of targets, projected emissions, and measures / actions to achieve targets.

Services: data compilation, process engineering

voluntary challenge & registry inc.
