

Project Profile

Family Violence Shelter Central Canada

A 5,200 sq. ft. 10 space home for physically abused women was designed. The two storey shelter is comprised of four double bedrooms, a single bedroom, a handicap bedroom, full laundry facilities, a consultation room, a children's playroom and playground area, a common kitchen, a dining and living area and a state of the art multi-level security system.

Services: Responsible for providing full services pertaining to architectural design and detailing and all disciplines of engineering, such as civil, structural, HVAC and electrical systems. Other tasks included the preparation of contract documents, calling of tenders and tender analysis and recommendation. Post construction services included the preparation of as-built drawings, warranty inspections and the preparation of the operations and maintenance manuals.
