

Project Profile

Mining Dry Facility

Central Canada

A 54,000 ft², three storey mine dry and office facility, along with all site services, was designed and engineered. This building houses showers and locker room facilities for 240 miners as well as the main offices for the mining facility administration. All services were designed to be most energy efficient. Energy efficient lighting as well as the reuse of shower water to reheat incoming fresh water were incorporated into the design. Air systems included typical office HVAC systems as well as the design of a drying system to dry the miners clothes

Services: architectural design, engineering design, basic and detailed engineering, procurement, assistance during construction.
