

Project Profile

Industrial Floor Rehabilitation Central Canada

The project involved the rehabilitation of an existing floor structure situated in a turn of the century building. The work included the replacement of floor areas to accept a paper roll loading requirement. All existing beams and archways were measured, inspected, and certified.

Services: Responsible for providing full services pertaining to the design and detailing for the floor structure. Other tasks included the preparation of contract documents, calling of tenders and tender analysis and recommendation. Post construction services included the preparation of as-built drawings.
