

Project Profile

Ingleside Library Expansion

Ingleside, Ontario

SUMMARY:

As part of the community need to have a larger library facility in Ingleside, HSP was retained to provide the consultant services required to expand the building and renovate the existing portion. HSP teamed up with Colizza-Bruni Architecture to provide the full services required for this project.

Due to tight budget constraints, the building was proposed and built of wood-frame construction on a standard foundation with cost and energy efficient building systems. The building included common HRV make-up air system, and individually controlled gas heating systems.

HSP's involvement was to provide structural engineering, mechanical engineering for HVAC and plumbing, and electrical engineering services from design to the end of construction.
