

## Project Profile

### Asset Condition Reporting System (ACRS)

Cornwall Island, Ontario

#### **SUMMARY:**

As part of the Federal government funding programs for native assets, an asset condition reporting system is implemented every three years to be completed by Professional Engineers to inspect all funded assets (buildings, utilities, roads, bridges) to determine their condition and any associated maintenance/repair items that are required. The program is a very comprehensive, systematic review of the various assets using an established system for component inspections and reporting.

HSP's involvement was to provide a complete report of the condition of the assets for the our Client to be submitted to Indian and Native Affairs Canada (INAC) in accordance with their manual.
