

## Project Profile

### Road Reconstruction

Cornwall Island, Ontario

#### **SUMMARY:**

An existing residential gravel roadway was needed to be upgraded to an asphalt roadway (rural cross-section) due to an increase in population density along the road. The road was 0.5km long.

HSP's involvement was to provide civil engineering services for the surveying of the existing roadway, coordinating the geotechnical investigation, designing the new cross-section and roadway alignment, provide tender assistance and construction/contract administration throughout the work.
